W.

Continuation of 3. NOTE: The proposed claim 16 contains newly added limitation, "pre-formed lignocellulosic substrate" that is considered as new matter and new issue that would require further consideration and/or search.

Continuation of 11. does NOT place the application in condition for allowance because: The Final rejection still stands. The rejection of claims 35-36 and 42-44, under 35 U.S.C. 112, first paragraph, still stands because the specification as originally presented does not provide proper support for the newly added limitations. The value of the test sample versus those of comparative examples is not the % o water absorption as presently claimed. For example, if Applicants mean to claim the % water absorption of the MDF treated with PMDI is 12%, etc., please state so. Applicants further contend that the reference of Diehr only teaches the polyisocyanate as a binder, and not an impregnating agent as recited in instant claims 1 and 16. However, as pointed out in the prior Office action, Diehr does teach the use of polyisocyanates as binders and/or impregnating agents (see col. 1, ln. 22-23; col. 4, ln. 54-55). And since the reference teaches the lignocellulosic material having the same chemical constituents and a smooth surface, the lignocellulosic material of Diehr would inherently have a surface that is low-gloss, as that in the presently claimed invention. Thus, Diehr does teach the presently claimed invention.
